Machine Learning Engineer (NLP)
San Francisco Bay Area, New York City, or Remote

Revelata, Inc. is a Palo Alto-based, early-stage startup on a mission to unlock the actionable information held in *any* financial document. Our machine learning platform automates the drudgery out of reading reams of text, just for that one valuable nugget. With our data service, finance professionals can bridge the chasm from text to insight and make better-informed decisions – *faster*.

Natural language processing is central to our mission. We use it to efficiently discover, extract, and synthesize data from unstructured documents, replacing countless man-hours of toil with a lightweight data service, where every data point is up-to-date, accurate, and easily traced back to its source.

We are looking for a **Machine Learning Engineer** to join us in building a world-class ML platform that helps our clients make use of the information embedded in the billions of financial documents found worldwide and across all industries. In this hands-on technical role, you will take ownership and build significant portions of our NLP pipelines and work over the entire ML development lifecycle, from prototyping to deployment. You will also play an important role in shaping our ML team as we expand.

The exceptional candidate would have a track record of successfully training neural language models to solve real-world problems, or publications in deep learning/NLP or application areas. We are also interested in candidates who are looking for and will thrive in a scrappy, small-team environment.

Qualifications:
- Graduating Seniors with industry/internship experience or relevant upper-level (graduate-level preferred) coursework in machine learning are invited to apply
- Experience in ML/NLP:
    - Have customized/trained/fine-tuned Transformer or other neural language models
    - Have successfully trained other deep learning models (e.g., for computer vision)
    - Know the latest industry and academic research
    - Experienced in (and like) wrangling messy data and scoping complex problems
    - Practice good MLOps habits
    - Experience with Python and AWS
- Care deeply about software engineering fundamentals, including clear documentation
- Care deeply about strong business outcomes
- Ability to work effectively by yourself and in a team
- Open communication style
